

## Dark Chocolate Potato Brownies

*Servings: 20*

*Prep time: 20 minutes*

*Baking temperature: 350 degrees*

*Baking time: 30 minutes*

- 4 squares unsweetened chocolate
- ¾ cup margarine
- 1 ⅔ cups sugar
- 1 teaspoon vanilla
- ¼ teaspoon salt
- 4 eggs
- 1 cup mashed Wisconsin potatoes
- 1 cup flour
- ½ cup chopped nuts
- Powdered sugar (optional)

Melt chocolate and margarine in saucepan on top of stove. While this mixture is cooling, cream the sugar, vanilla salt and eggs together. Add chocolate mixture and mix well. Add the potatoes, flour and nuts. Beat until creamy. Pour into greased and floured 9x13-inch cake pan and bake. The brownies should be a chewy consistency, so be careful not to over-bake. Cool and sprinkle with powdered sugar.

This recipe is from the Wisconsin Potato Growers Auxiliary Cookbook. More recipes can be found at [wisconsinpotatoes.com](http://wisconsinpotatoes.com).

## Rocket Science ... And More.

Wisconsin Public Service believes in the power of science — especially when it involves inspiring young minds.

That's why we're pleased to co-sponsor The Einstein Project Science Expo.

**Saturday, March 13**  
**9 a.m. to 4 p.m.**  
**Shopko Hall, Green Bay, WI**  
**Tickets: \$4-Children 3-18,**  
**\$2-Adults, Kids 2 and under Free**

The Expo lets kids discover science as it shows up in everyday life. Events explore:

- Life Science
- Earth Science
- Physical Science
- Engineering Science
- Space and Flight Science
- Environmental Science
- Forensic Science

The event also features a Science Fair for grades 2-8, with prizes awarded to winning 6-8 grade students and participant packets for all entrants.

Find more information at [einsteinproject.com](http://einsteinproject.com), or call The Einstein Project at **920-884-8800**.

## Stay Safe With Portable Electric Generators

When power outages occur, portable generators can be a great convenience. But, like any power source, they must be installed and used properly. Follow the manufacturer's instructions and these important safety tips:

- **Selection** — The portable generator you use should be the correct size, with a slightly larger output than the power level needed to operate all the equipment that it is connected to. Inappropriate generator size could damage connected equipment or the generator itself.
- **Connection** — Do not connect a portable generator directly to a building's wiring or plug the generator into an electrical outlet. This is extremely dangerous to utility line mechanics repairing downed power lines and to the generator and appliances plugged into the generator. Have a licensed electrician install a transfer switch to isolate the building wiring from the utility distribution system.
- **Cords** — Use the properly sized and rated power cords to connect equipment to the portable generator. Use heavy-duty, outdoor-rated, grounded extension cords that are in good shape.
- **Space** — Never operate a generator in an enclosed or partially enclosed area. A generator requires proper ventilation in an outdoor area.
- **Refueling** — Never refuel an operating or hot generator. Gasoline spilled on a hot engine could ignite. Keep a fully charged fire extinguisher near the generator.
- **Children** — Keep children away from all portable generators at all times.
